Table of Contents

Module 1

Unlimited Possibilities!	11
Objectives	11
Review of “Traditional” Rules	12
Traditional DRC	14
Why the Limitations?.....	15
With a Database That Stored Properties... ..	16
Examples of Problems We Could Solve	17
Requirements for Enhancements	18
Introducing... DFM Properties	19
Example of a Property-Based Rule	20
How eqDRC “Works”	22
DFM PROPERTY	23
Creating Properties	25
Using a Property as a Check	26
The eqDRC Toolset	27
Module Summary	29
Comparison of Results.....	30
Additional Resources for Module 1	31
Lab Exercise	32

Module 2

Basic Measurement Functions	33
Objectives	33
Review	34
About Measurement Functions	35
What Are Measurable Properties of Polygons?.....	36
Area Function	37
Perimeter Function.....	38
Count Function	39
What Are Measurable Properties of Edges?	40
LENGTH Function	41
What Are the Measurable Properties of Errors?	42
Error Width Functions	43
Common Run Length Functions	45
Common Run Length Coordinates	46
Edge Pair Angles	47
Measurement Functions Are Not Always Defined	48
Review: Using Measurement Functions	49
Using Measurement Functions	50
Example 1: Run Length Dependent Spacing Check	51
Additional Resources for Module 2.....	54

Lab Exercise	55
Module 3	
Single-Layer Properties	57
Objectives	57
Single-Layer Properties	58
Example 1: Characterizing Transitions	59
Example 2: Reporting Error Data	60
Enhancing Existing Rules	61
Properties for Designers.	62
Example 3: Enhancing Min CD Reporting	63
Using a Single-Layer Property as a Check	64
DFM Property Syntax – Used as Check	65
Example 4: Finding Too Small Gates	66
A New Approach to Error Layers	67
Generating Error Layers	68
Example 5: Flagging Recommended Rule Violations.	69
Summary	70
Additional Resources for Module 3.	71
Lab Exercise	72
Module 4	
Multi-Layer Properties.	73
Objectives	73
Review	74
Properties Can Reflect Multi-Layer Topology	75
Multi-Layer Properties.	77
Terminology: Cluster.	78
Mapping Objects	79
Keywords That Control Clustering	80
Clustering Intersecting Objects	81
Clustering Overlapping Objects.	82
Example 1: Number of Contacts in SD Regions	84
Resolving Ambiguity.	87
Example 2: Ratio of Gate Area to SD Area.	88
Calculating Properties	91
Evaluating Multi-Layer Property Expressions	92
Additional Resources for Module 5.	93
Lab Exercise	94
Module 5	
More About Multi-Layer Properties.	95
Objectives	95
Review: Calculating Properties	96
Evaluating Multi-Layer Property Expressions	97
Example 1: Reporting Longest and Shortest Edges.	100
Multiple Secondary_Layers With SUM, PROD, MIN, MAX	101
Implicit Versus Explicit Sums	103

Table of Contents

Review: Keywords That Control Clustering	104
Clustering Error Data	105
Clustering Error Data With REGION	106
Example 3: Tracking Error Counts	108
Checking Only a Portion of the Design	109
Summary	111
Additional Resources for Module 5	112
Lab Exercise	113
Module 6	
Reporting eqDRC Results	115
Objectives	115
You Have Properties... Now What?	116
Understanding Results Databases	117
Comparison of Results	118
Why Save Results as DFM RDB?	119
Viewing Properties of Check Results	120
Viewing Property Statistics	121
Grouping and Sorting Results By Property Values	122
Viewing Property Histograms	123
Viewing Property Colormaps	124
The DFM RDB Operation	125
Variables Supported By DFM RDB	126
About DFM RDB Files	127
Two Concerns When Writing DFM RDB Operations	128
What Data Gets Written to the DFM RDB?	129
Controlling Check Names	130
Defining Informative Check Names	131
Adding Comments to a Check	132
The Impact of How Data Is Organized	133
How Is Data Organized Within the DFM RDB?	134
How ALL CELLS Impacts Coordinates and Views	135
How ALL CELLS Impacts Filtering	136
DFM RDB File Format	137
Which Types of Cells Do You Want?	138
Streamlining RDB Creation	139
DFM DEFAULTS Syntax	140
Example 1: DFM DEFAULTS	141
Displaying Property Values	142
Configuring Property Display in DESIGNrev	143
Displaying Property Values in DESIGNrev	144
Displaying Property Values in Cadence Virtuoso	145
Module Summary	146
Additional Resources for Module 6	147
Lab Exercise	148

Module 7	
Writing Expressions That Work	149
Objectives	149
DFM Expressions	150
Unary Operators	151
Binary Operators	152
Relational Operators	153
Review of How Expressions Are Evaluated	154
Conditionals	155
Expressions Do Not Always Evaluate!	157
Expression Evaluation Examples	158
Ensuring That an Expression Does Evaluate	162
Writing Expression Chains	163
Example 2: SD to Contact Area Ratio	165
Where Expressions Come From	168
Designing Expressions From Empirical Data	169
Example 3: Wide Metal Spacing Check	170
Module Summary	173
Additional Resources for Module 7	174
Lab Exercise	175
Module 8	
Hierarchical Considerations	177
Objectives	177
Orientation-Specific Perimeter Functions	178
Perimeter Projection Functions	179
Orientation-Specific LENGTH Functions	180
Edge Projection Functions	181
Orientation-Specific Error Width Functions	182
Error Width Projection Functions	183
Orientation-Specific Common Run Length Functions	184
Common Run Length Projections	185
Example 1: Finding Non-Rectangular Gates	186
Example 2: Reporting on Too Small Gates	187
Where Directional Measurements are Taken	188
Promotion in Calibre Hierarchical Processing	189
Why Hierarchy Matters	191
Additional Resources for Module 8	192
Lab Exercise	193
Module 9	
Writing Runtime-Efficient eqDRC Rule Files	195
Objectives	195
Using eqDRC in Production Rule Decks	196
Transferring Properties	197
Referencing Properties on Input Layers	198
More About Referencing Properties on Secondary_Layers	199
Example 1: Transferring a DFM Property to Another Layer	200

Table of Contents

Referencing Properties on Input Layers in Expressions	201
Example 2: Using PROPERTY() in a DFM Expression	202
Reusing Properties in Subsequent Expressions	204
Example 3: Reporting Min, Max and Average Values	206
Defining DFM Functions	207
DFM FUNCTION Syntax	208
Calling DFM Functions	211
Debugging DFM Functions	212
Example 4: Device-Dependent Gate Function	213
When Traditional SVRF Does Not Work	215
Example 5: Enhanced Spacing Check	216
Example 6: Grouping By Edge Pair Interactions	219
Module Summary	222
Additional Resources for Module 9	223
Lab Exercise	224
Module 10	
Working With Error Data and Layout Properties	225
Objectives	225
Adding Control Over Properties of Edge Pairs	226
How DFM PROPERTY Manages Edge Pairs	227
Splitting Error Edge Data	228
Example 1: Enhanced Wide Metal Spacing Check	230
Converting Error Data into Polygons or Edges	231
Copying Multiple Layers With DFM COPY	237
Extracting Properties from Layout Data	238
Types of Properties	239
Keeping Non-Geometric Layout Information Distinct	240
Storing Layout Properties as DFM Properties	241
Other Uses for DFM PROPERTY MERGE	244
Storing Layout Text as DFM Properties	246
Example 1: Checking Metal Ports	247
Writing DFM Properties as Non-Geometric Layout Data	248
Additional Resources for Module 10	249
Lab Exercise	250
Module 11	
Writing eqDRC Applications	251
Objectives	251
In Production, Database Size Matters	252
Chaining Non-Persistent Properties	253
Application 1: Tracking Down Current Crowding	255
Application 1: Approximating the Current Flow	256
Application 1: Characterizing Effective Gate Width	257
Application 1: Approximating Effective Gate Width	259
Application 1: Reporting Effective Gate Loss	261
Isolating Error Edge Pairs to Measure	262
Unique Features of DFM SPACE	263

Application 2: Local Metal Pitch Uniformity	264
Basic Approach	265
Local Metal Pitch Uniformity (Code)	266
Application 3: Max Via Redundancy Check	267
Calculating Max Vias	268
Using Basic Algebra to Find Max Via Equation	269
Function for Checking Vias	270
Module Summary	271
Additional Resources for Module 11	272
Lab Exercise	273
Module 12	
Building Net Clusters	275
Objectives	275
Review	276
What If Nets Matter?	277
Using Connectivity When Building Clusters	278
Connectivity and Clustering	279
Example 1: Total Gate Width Connected to Metal	280
Example 2: Via Count for Nets	284
Example 3: Total Run Length of Min Width Metal	286
Module Summary	289
Additional Resources for Module 12	290
Lab Exercise	291
Module 13	
Accumulating Net Properties	293
Objectives	293
What If Net-Aware Clustering Is Not Enough?	294
Connectivity and Property Calculation	295
Example 1: Counting Polygons on a Net	297
Example 2: Reporting Non-Redundant Vias on M1	298
Connectivity-Based Properties Pop Quiz 1	299
Answer 1	300
Answer 1 Illustrated	301
Connectivity-Based Properties Pop Quiz 2	302
Connectivity-Based Properties Pop Quiz 3	303
Answer 3	304
Answer 3: CONNECTED Illustrated	305
Answer 3: NODAL Illustrated	306
Answer 3: ACCUMULATE ONLY BY NET Illustrated	307
Connectivity-Based Properties Pop Quiz 4	308
Answer 4: Illustrated	309
Best Practice: Accumulated Net Values	310
Module Summary	311
Additional Resources for Module 13	312
Lab Exercise	313

Table of Contents

Module 14

Working With Connectivity.....	315
Objectives	315
About Connectivity	316
Connectivity Review	317
Storing NetIDs as DFM Properties	318
Using the NETID Function	319
Review: Referencing Properties	320
More About Referencing Properties	321
Accessing Net Number Properties.....	322
More About Using Ordinals	323
Because Ordinals Are Local... ..	324
Using Ordinals With Polygon or Edge Data	326
Why We Need to Know the Number of Objects	327
Using Ordinals With Error Edge Pair Data	328
Example 1: Using Ordinals for Comparing Net IDs	329
Defining Connectivity	331
Defining Connectivity With DFM STAMP.....	332
DFM STAMP – Data Structure View	333
DFM STAMP – Example	334
Module Summary	335
Additional Resources for Module 14.....	336
Lab Exercise	337
